CORE DOCUMENTATION

QUICKSTART

CLI QUICKSTART

GUIDE

1. Overview

2. Setup

- 3. Learning Angular
- 4. Architecture
- 5. The Root Module
- 6. Displaying Data
- 7. User Input
- 8. Forms
- 9. Dependency Injection

Setup a local development environment

The QuickStart live-coding example is an Angular *playground*. It's not where you'd develop a real application. You should develop locally on your own machine ... and that's also how we think you should learn Angular.

Setting up a new project on your machine is quick and easy with the QuickStart seed, maintained on github.

The QuickStart seed live-example is QuickStart plus the app.module.ts and main.ts application files (described below) that facilitate richer application examples.

Make sure you have node and npm installed. Then ...

- 1. Create a project folder (you can call it quickstart and rename it later).
- Clone or download the QuickStart seed into your project folder.
- Install npm packages.
- 4. Run npm start to launch the sample application.

FEATURES DOCS

EVENTS

NEWS

- typings join provides additional definition lifes for libraries that the Typescript compiler doesnt hatively recognize:
- · systemis.config.js provides information to a module loader about where to find application modules, and registers all the necessary packages. It also contains other packages that will be needed by later documentation examples.

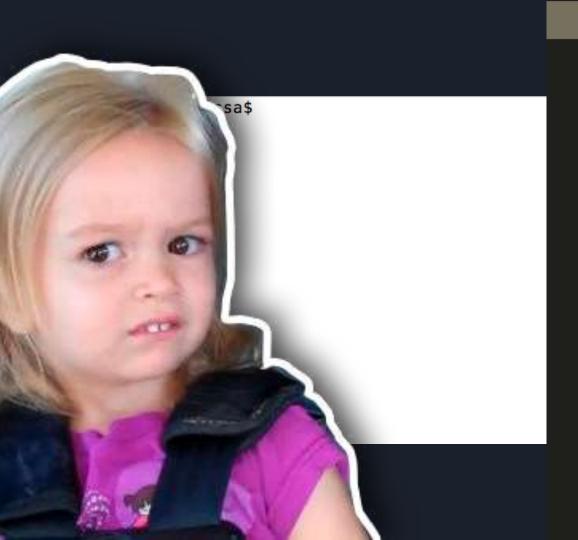

Create each of these files in your project directory. Populate them by pasting in text from the tabs in the example box below.

Abrindo a aplicação local

ng serve --open

v:angular Vanessa\$ cd linesabout/
v:linesabout Vanessa\$

Welcome to app!

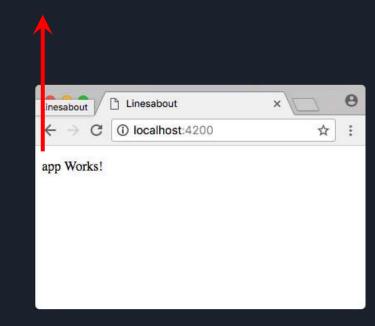

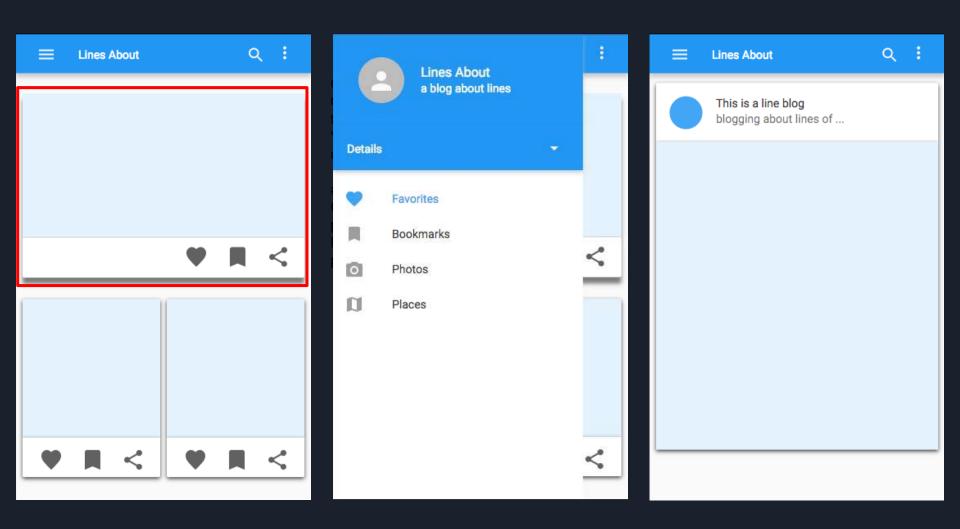

Here are some links to help you start:

- Tour of Heroes
- CLI Documentation
- Angular blog

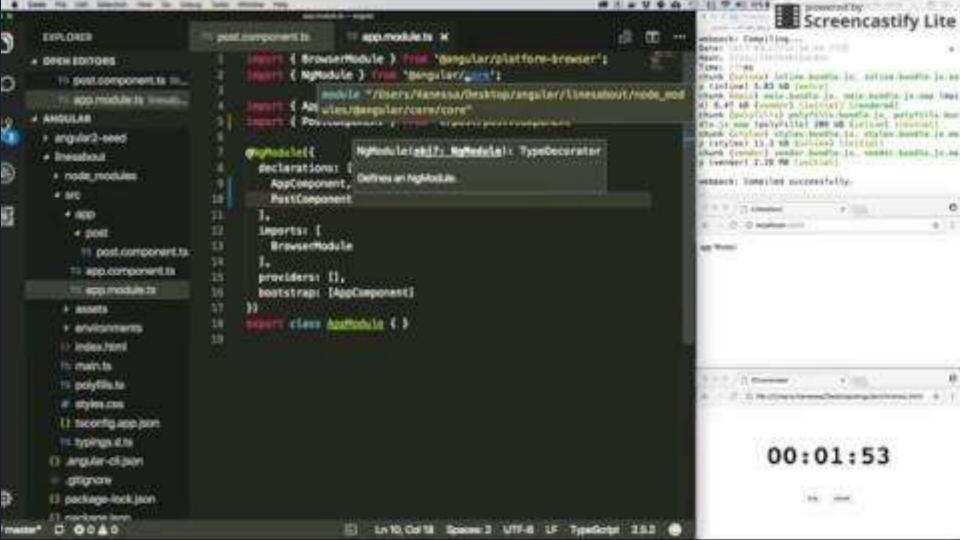

ng new *linesabout*

ng new *linesabout --minimal*

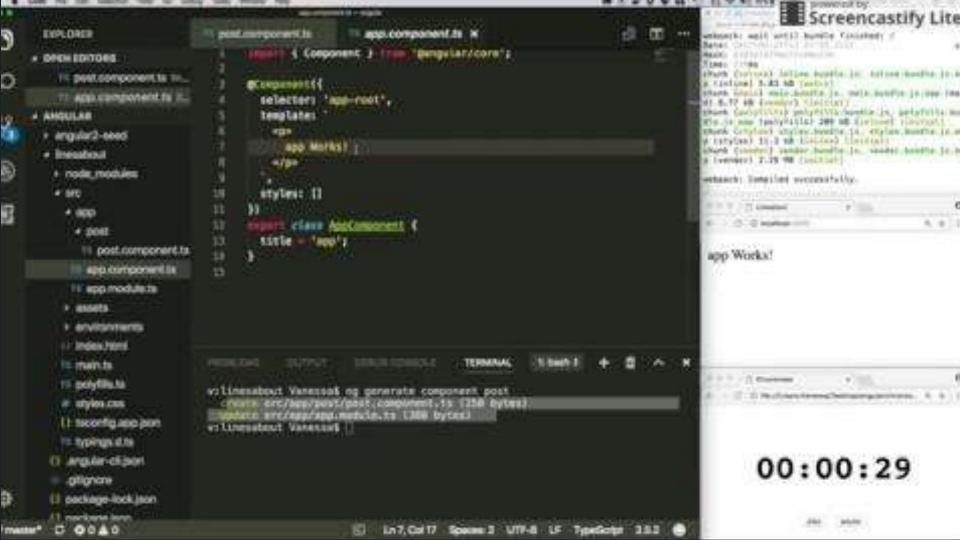

componentes

Gerando coisas

ng generate

ng generate component

ng generate component nomecomponente

```
$ ng generate component post
  create src/app/post/post.component.ts
(250 bytes)
  update src/app/app.module.ts (388 bytes)
```

ng g c nomecomponente

\$ ng g c postlist

```
create src/app/postlist/postlist.component.css (0 bytes)
create src/app/postlist/postlist.component.html (27 bytes)
create src/app/postlist/postlist.component.spec.ts (642 bytes)
create src/app/postlist/postlist.component.ts (277 bytes)
update src/app/app.module.ts (478 bytes)
```

O que mais posso gerar?

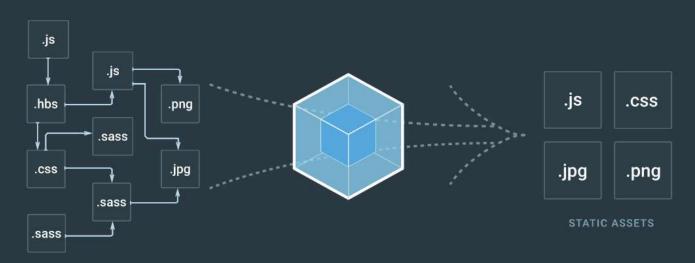

class component directive enum guard interface module pipe service

Cli is alive!

Nos últimos meses

Junho: --minimal
 named bundles
 3rd party: lincenças unidas

Agosto: --build-optimizer
 Angular Universal (server rendering app)
 Initial Support for early betas of v5

Nos últimos meses

• Setembro:

Schematics.

Permite gerar seu próprios templates do seu projeto ou da sua empresa usando os comando da CLI

Cli next()

E nos próximos

- Ahead of Time (AOT) por padrão Melhorar o tempo de compilação
- Ng update ajudar deixar seu projeto sempre atualizado, em conjunto com Material components, e os recursos de i18n

E nos próximos

- Library Support De Angular App para outras Angular Apps
- Build Optimizer por padrão consolidar as otimizações e build ser o mais otimizado possível
- Services Workers por padrão PWAs com Angular

The Past, Present, and Future of the Angular CLI

The <u>Angular CLI</u> is a command-line interface for building Angular applications, and over the last year it has become one of the most essential tools in an Angular developer's toolbox.
